SAUNDERS GARDENS

M. E. Latham

NORTH SCITUATE, R. I.

Address, December 1st to April 1st: Mansfield, Mass.

INTRODUCTION

FOR the coming season we are offering some choice new varieties of the Gladiolus of American and European originations; also many of the Kunderd varieties, plain and ruffled, have been added. If you want something choice and out of the ordinary, that is not everywhere common, we have it, as well as the better class of so-called common varieties.

It is a great pleasure to walk through the garden each morning during the flowering season, and watch for the new buds to open and unfurl their beauty. If you have friends whom you know love flowers, let us send them a box of bulbs for Christmas or Easter with your card, or send us their name and address, and we will send them a catalog, so that they may make their own selection.

The Primulinus Hybrids are more beautiful and popular each year. In form and color, no other flower quite equals them. Smaller than the other types of Gladioli, the daintiness of form and arrangement on the graceful spike, add to the decorative value. The colors range from the lightest primrose through apricots, yellows, orange and bronze, to deep rose reds. The small blooms of Primulinus species, just as it grows in South Africa, have quite the daintest yellow flowers obtainable in mid-Summer.

PLANTING, CULTURE, STORAGE

If possible, spade in a good covering of manure late in the Fall, preceding the plantings to follow. The richer the soil and better the care and culture, the better the results will be. At planting time only well rotted manure or Potato fertilizer should be used. Plant the bulbs in May or June. Bulbs can be planted 4 inches deep and over, in mellow soil, and 4 to 8 inches apart in the row. The deeper the bulb is planted will help to keep the plant from falling over at blooming time.

Sheep manure can be applied to the soil near the rows once every week care being exercised not to make applications too strong. Frequent thorough waterings of the plants at evening is a wonderful stimulant and gives the blooms much greater sun resistance, and lasting qualities. Always keep a soil crust from forming in the rows among the plants. Do not work the soil when wet.

BLOOMING.—For best results cut the spike when the first flowers open and let them bloom in the house. Each morning remove the wilted blossoms, cut off a little of the stem, and give fresh water.

STORING.—In the Fall, before hard frosts, dig the bulbs and cut the tops off. Dry well in the air and sunshine, cure thoroughly indoors for a few weeks, then store in a cool, dry cellar. Keep as near 40 degrees as possible, and do not place the bulbs more than 4 inches deep while in storage.

Special collections will be made up for any of our customers who may wish our aid in deciding what to plant. Please state choice of colors, varieties you have grown, and amounts you wish to buy.

Special Prize Collection

These varieties took First Prize at the Exhibition of the Rhode Island Horticultural Society in 1921. We will send one bulb each, with a year's subscription to the *Flower Grower* for \$3.50.
